

AM for lightweight air vehicles in the spotlights

04 April 2022, 02:00

Olivier Rigo

The AMable project provides support for 'design for additive manufacturing' and for developing the AM chain. The AMable Industrial Technology Talk on 8 April is an online event, focusing on additive manufacturing for lightweight air vehicles.

The AMable H2020 project supports companies who are taking the initial steps towards additive manufacturing. Various actors have bundled forces in order to meet the challenges arising from AM at European level. AMable provides services aimed at the challenges faced by newcomers, enthusiasts and experts. All sorts of technologies are being discussed.

Webinar

During the online AMable Industrial Technology Talk 'AM for lightweight air vehicles' on 8 April 2022 (10:00-12:00) experts and industrial speakers will present the applicability of additive manufacturing on air vehicles, from sky to space. Speakers will address their concept, approach, application and business perspective. You will learn about the challenges, the benefits and an industrial point of view on the use of AM in drones and other air vehicles.
