

Microchip for rapid antibiotic-resistant bacteria testing

18 June 2020, 02:00

Denis Vandormael

Coris BioConcept approached Sirris for their expertise in microproduction, to develop a biomedical microchip to rapidly detect antibiotic-resistant bacteria in a single test.

Coris BioConcept, a medium-sized company based in Gemboux, Namur Province, specialises in developing, manufacturing and marketing rapid diagnostic kits for the medical sector. The test equipment is mainly used in hospital laboratories to detect whether patients are infected with a bacterium, virus or parasite.
