

Discover how people, technology and innovation shape our future

12 September 2022, 14:48

Benjamin Denayer

During the European Manufacturing Conference 2022, which will take place in Brussels on 27 and 28 September, policymakers and representatives from industry and society will discuss how people, technology, and innovation shape the future of Europe.

The conference will focus on the future of European manufacturing with speakers, panellists and participants diving into the challenges and opportunities at this critical point in time and exploring how public-private cooperation can help overcome and embrace them.

The conference will cover topics such as:

- Competitiveness
- Resilience
- Green and circular manufacturing
- Material processing
- Sectorial changes
- Connectivity, Data, AI and 5G in manufacturing
- Interrelations between national and European funding instruments
- Jobs & skills

One of the speakers will be our own Managing Director, Herman Derache.

In addition to the discussion on the relevant trends, networking moments and an evening reception will be an exceptional opportunity for the attendees to explore their common interests and possibilities for solving the manufacturing challenges.

The European Manufacturing Conference is co-organised by the European Factories of the Future Association (EFFRA), EIT Manufacturing and ManuFuture. These three manufacturing actors share the common belief that cooperation is key to creating a favourable environment for tackling and ultimately solving the most pressing challenges of today's industry.

Interested in participating in this unique event? Please visit the Conference website for further information and the programme!
