

Browse through wind-energy-related publications and datasets

24 April 2023, 10:24

The PHairywinD project is a Belgian academic offshore wind network for young researchers, as a launchpad for academic excellence, industrial interaction and international outreach. This data exchange network is your go-to destination for all wind-energy-related research. Its data pool with publications and datasets is now online.

PHairywinD's mission is to provide an overview of datasets relevant to the field. Those datasets can be already publicly available or generated by our Phairywind PhD students. Looking to advance your research or increase efficiency in the wind industry? The PhairywinD data pool has something for everyone.

Sirris is committed to maintaining and updating the data pool, ensuring that you have access to the most current and relevant data sets. We invite you to explore our collection of datasets and collaborate with our PhD students to push the boundaries of wind energy research even further.
