

Hot topics in material innovations on SIM Materials Forum

10 May 2023, 11:50

Benjamin Vandeputte

The SIM Materials Forum on material innovations is set up to exchange knowledge and skills, provide updates on SIM projects and enable visitors to meet the materials community in Flanders and beyond. SIM Materials Forum is about getting to know the industry and gaining insights on material innovations in Flanders.

Ten experts are lined up to share their vision and latest innovations on the topics 'Climate & Energy' and 'Digitalisation for Sustainability'.

The half-day event will start with two keynote speeches: Geert Noels and Kristof Eggermont from Econopolis will talk about ‘Climate Shock' 20 solutions for government, companies & citizens in Belgium. Kamila Slupek from Eurometaux will discuss 'metals for the energy transition'. You will also have the opportunity to choose from at least three speakers for each track of lectures.

Why join the Materials Community?

The SIM Materials Forum is the place to be to discover material innovations:

- get inspired by 10 experts sharing their vision and latest innovations during exciting lectures;
- discover material innovations at the materials market;
- learn about science and engineering at the poster session;
- gain ample opportunities to network with the materials community.

The SIM Materials Forum will take place during the Advanced Engineering fair, **on 24 May 2023**. It is an ideal platform for companies that contribute towards the production of innovative products, technologies, and electronics.
Need more information? Read all about the Materials Forum on the SIM website and register for the event.
