Thierry Coutelier

We help you turn your digital transformation into a success

Cybersecurity, IoT, AI and AR are more than just buzz words: they are all part of the industry's digital transformation. To transform into a sustainable and competitive manufacturing industry, companies better keep up, to be able to adopt and use these key technologies to their best advantage. This with a little help from Sirris.

To inform, advise and inspire manufacturing companies in Wallonia in their digital transformation, Sirris will organise four thematic events in the course of the coming months. These events are free, thanks to the support of the European Digital Innovation Hub WalHub, to give you maximal opportunity to attend and get to know the technologies to become a futureproof manufacturing company.

What we have in store for you

During the event 'Integration of AI, IoT and AR within the Sirris Product Development Hub' on **13 November 2023** you can discover **the many aspects of the digital transformation** taking place within the "application labs" at the Sirris Product Development Hub. The plenary session will be

followed by an inspiring visit to the workshops allowing you to get a better understanding of the potential for digitalisation within the industry. Read further and register.

On **20 November 2023** Sirris's experts will help you explore the many **cybersecurity challenges and risks** that companies in the manufacturing sector face during 'Cybersecurity challenges in manufacturing industry: define your action plan'. They will also cover developments in the regulatory environment that will have an impact on your cybersecurity strategy. Read further and register.

On **1 December 2023** during 'Cybersecurity in manufacturing industry – Network and OT security' you will learn everything there is to know about **cybersecurity and how best to secure the IT network and OT** within your manufacturing company. We will provide you with best practices and practical examples from real case studies. Read further and register.

On **15 January 2024** you can discover how to make an impact on your manufacturing business using **artificial intelligence** during the practical workshop 'Exploiting AI within the manufacturing industry - Session 1: predicting Remaining Useful Life (RUL) and predictive maintenance.' You will find out how to best exploit the data available in your environment to reach this aim. Read further and register.

The European Digital Innovation Hubs are an initiative of the "Digital Europe" programme, co-financed by the European Commission and Wallonia. All these events are organised within the framework of the eDIH WalHub project, 101083685 project.
