Tatiana Galibus

Start activating your cybersecurity skills!

To help SMEs and their employees strengthen their defences against cyber threats, CyberActive offers a series of hands-on training sessions. These sessions are specifically designed for professionals in both the manufacturing and digital services sectors, helping them navigate evolving cybersecurity challenges, including compliance with the NIS2 directive.

In September 2023 we launched a cybersecurity project – CyberActive – with the ambition to improve cybersecurity mindset and skills in SMEs and related target groups (especially for the manufacturing and digital service sectors).

The goal of this project is to develop and deliver material to increase the active CS skills of these target groups, so they can build and start to execute their cybersecurity strategy. We provide hands-on training sessions, instructive videos and learning material tailored to **administrators, operators, maintenance technicians, developers, and support teams**. We break down complex cybersecurity concepts into **clear, actionable steps** that you can implement immediately in your organisation.

You can find the practical information on training sessions and the available material on our website, www.cyberactive.be :

For digital services you can join the following training sessions:

- LEARN TO BUILD trusted digital services by stepping into application security and DevSecOp
- Make you AI systems safe and secure

For manufacturing industry a training session on NIS2 is planned:

- NIS2 explained and must-acts overview (French session)
