

Co-creation for ReX initiatives | Road to ReX - part 6

05 November 2025, 15:21

Thomas Vandenhaute

Align goals and accelerate joint progress

Is co-creation simply collaboration? Not exactly. In co-creation, partners jointly influence both the process and the outcome. You evolve together instead of merely exchanging tasks. This goes beyond a traditional customer-supplier relationship.

For both social enterprises and manufacturing companies, this means you actively align goals, roles and expectations. By aligning goals, you build trust and accelerate the progress of ReX initiatives.

> Every social enterprise has its own strengths and context. This framework helps you take the most relevant steps for your situation. We have bundled all insights into one publication.

Why aligning goals is crucial

You know where you want to go. Your partner does too. That starting point is rarely identical. By explicitly sharing expectations, room for manoeuvre and boundary conditions, you clarify where overlap exists.

Goals do not need to be identical. They need to be sufficiently aligned in scope, timing or type of activity to enable joint action.

Start fast and learn

Do you see a feasible shared step? Start immediately. Each partner takes responsibility for part of the activities. Each contributes to the costs and effort. Leave room to adjust.

By acting together, mutual understanding grows of each other’s operational, organisational and economic context. This builds momentum and trust.

Roadmap for co-creation

Step 1: explore each other's criteria and uncertainties

Test each other’s success criteria. Work with must-haves, nice-to-haves and no-go’s. Describe your desired situation as a short storyline. This creates recognition and invites feedback.
Ask why and why-not questions. Make risks, assumptions and uncertainties explicit so they can be discussed.

Expect friction. Postpone judgement. Plan a short feedback moment. Take time to reflect and let insights settle. Involve colleagues from different disciplines. Their perspective sharpens next steps.

Practical example
A social enterprise proposes enclave work at a manufacturing company. The production site proves operationally unsuitable. The account manager explores alternatives and identifies opportunities in logistics activities.

Both parties start with a logistics collaboration. They learn about each other’s context and boundary conditions. Later, they jointly explore ReX processes again, this time with greater mutual understanding and trust.

Step 2: build a shared desired situation

Combine both storylines into one shared vision. Describe the situation as if major bottlenecks have been resolved. Capture only the essential elements and leave details open. This makes the objective concrete and shared without losing flexibility for learning and adjustment.

The combined list of intended results may look like this:

Objectives	
Employment min. 2 FTE	M
Flexible automation	Ni
Investment >€100k	Na
Potential for scaling up to other products from this customer or another customer	M
Fits in current location (workshop, warehouse)	Mo
Support staff necessary in operational tasks	Na
Logistics tasks (transport, storage, etc.)	N

Step 3: reduce uncertainties

Share information, assumptions and risks. Acknowledge each other’s priorities and constraints. Agree on how you inform, question and adjust one another.

Choose a shared workspace and define agreements on access and version control. Plan short and regular alignment moments. Combine physical, digital and phone meetings.

Step 4: define shared priorities

Answer the following three questions:

1. Can target group staff handle this activity?
2. Can we get this organised practically?
3. Is the business case solid?

Select actions that fit within the current room for manoeuvre of both partners. Use a simple prioritisation method and work step by step.

Tip: setting priorities is not always easy. So use this simple method to determine the order of actions together with your partner.

If setting priorities
consider the pro

1 **Describe your questions and uncertainties as**

Example: we don't know how much customers are willing to p

- *Customers only want to pay for products that look good*
- *Customers are willing to pay up to 60% of the new pric*

2 **Write each assumption on a post-it**

3 **Score each assumption on importance on the**

At the bottom: 'just important'. At the top: 'showstopper'.

4 **Place the assumptions on the horizontal axis a**

The order matters, not the exact timing. Assumptions are oft

Think about: what if the assumption is true or false? This he

5 **The upper-left corner shows your priorities**

You'll see that the most important and earliest assumptions s

Tips for momentum and trust

- Start small and visible
- Work with short learning loops
- Document and share lessons learnt
- Keep pace of contact light and frequency high

Conclusion

By explicitly aligning goals, co-creation becomes a focused approach instead of informal collaboration. You make expectations, uncertainties and priorities discussable. This creates a shared future vision that guides action. Small, feasible steps build trust and accelerate learning. In this way, ReX grows into a structural collaboration with impact for partner, customer and organisation.

Summary

Co-creation is more than collaboration. You align goals, share uncertainties and build a shared narrative. This leads to feasible joint steps that accelerate ReX initiatives and strengthen trust between partners.

A look ahead at the series

In the next article, we further develop the joint business case. We show how you make the numbers work, internally and together with your partner.
