

# MICRO- MANUFACTURING

Techniques and strategies for the manufacture of products and/or features that have **at least one functional detail in the submillimetric down to micrometric range**

## Technologies

### Advantages

- Very small-size optical, mechanical or fluidic parts
- Functional micro-features in macro products
- Minimally invasive addition of functions in products or processes (smartisation)
- Improved reliability and robustness
- High degree of customization
- Reduced production time and cost
- Reduced environmental footprint
