

MADE REAL

Experience the technology

Charleroi
05/12
Quality by
manufacturing
excellence

Join us on Thursday, December 5th, for the official launch of our brand-new lab at A6K in Charleroi, part of the **"4.0 Made Real Roadshow"**. Our new lab is designed to help the industry reach new heights in manufacturing excellence.

Within the lab practical applications on how to achieve highest level of quality are demonstrated by means of a 3D print farm that is continuously monitored for any process deviations and an automated cell for cleaning parts with a cobot. Next to those applications the lab will also house state-of-the-art digital tools for supporting industry in composing their own manufacturing excellence strategy.

Experience the future of manufacturing through our 'serious game,' where you can test the impact of strategic decisions on a production system. Step into our 'VR factory' to explore what the factory of the future looks like. Don't miss this chance to see innovation in action!
